Pivot3® Deals Out High-Performance to Meet Strict Surveillance Gaming Regulations

The User

"The Pivot3 solution maximizes our surveillance efforts in a cost-effective way to protect the assets of the Nation and ensure the integrity of our gaming,"

— Jason Nichols, Gaming Commissioner for the Muscogee (Creek) Nation."

The Challenges

- Introduce mega-pixel video cameras to closely monitor gaming operations and enhance financial controls at a thriving casino resort
- Meet strict gaming regulations for video capture and retrieval, even during component failures
- Store video from over 1,000 IP cameras requiring more than 200 gigabit-per-second performance

The Solution

The Creek Nation selected Pivot3 High-Definition Storage™ to support the bandwidth and capacity needs of nearly a thousand high-definition IP cameras installed in security-sensitive locations, including table games, cashiers' windows and kiosks. This installation, supporting more than a petabyte of storage, represents one of the largest virtual matrix systems deployed in the world today. The system provides extensive failover and redundancy features, which are necessary to meet the stringent requirements of the gaming commission regulations.
